

NORTHERN CRICKET FROG
Acris crepitans

Habitat

They live on the muddy banks of slow-moving, permanent, freshwater bodies such as lakes, ponds, marshes, and shallow streams.

Food

Mosquitoes, flies, centipedes, millipedes, mites, and ticks

Predators

They are often eaten by birds and fish.

Reproduction

They attach their eggs to plants on the edges of slow-moving streams and ponds.

Where are they today?

They are an endangered species in New York State.
