

Name: _____

Inwood Forest Investigations

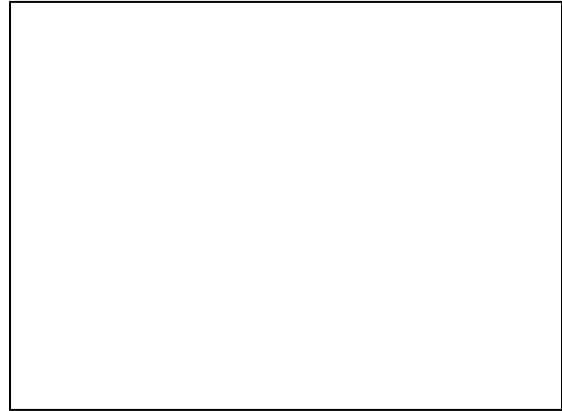

Pick at least three trees to study. For each tree, measure its circumference using the tape measure. Next, make a bark rubbing of the tree using a crayon. Finally, try to figure out the species of the tree (hint: it is easiest to determine a species by the tree's leaves).

Tree 1:

Circumference: _____

Species: _____

Bark rubbing:

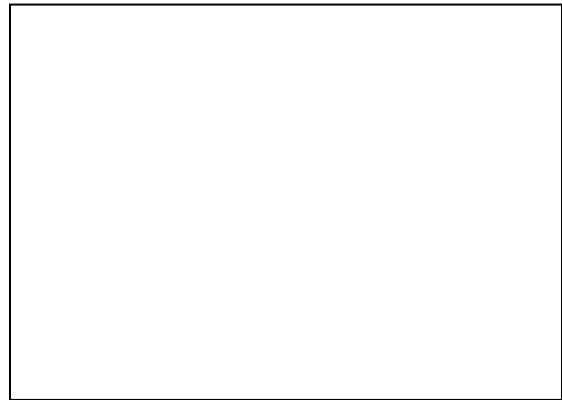

Tree 2:

Circumference: _____

Species: _____

Bark rubbing:

Tree 3:

Circumference: _____

Species: _____

Bark rubbing:

Collect a few different leaves you find on the ground, and draw them here. If you can figure out the species of the tree each leaf is from, write it next to your drawing of the leaf.
